Information on cable laying:

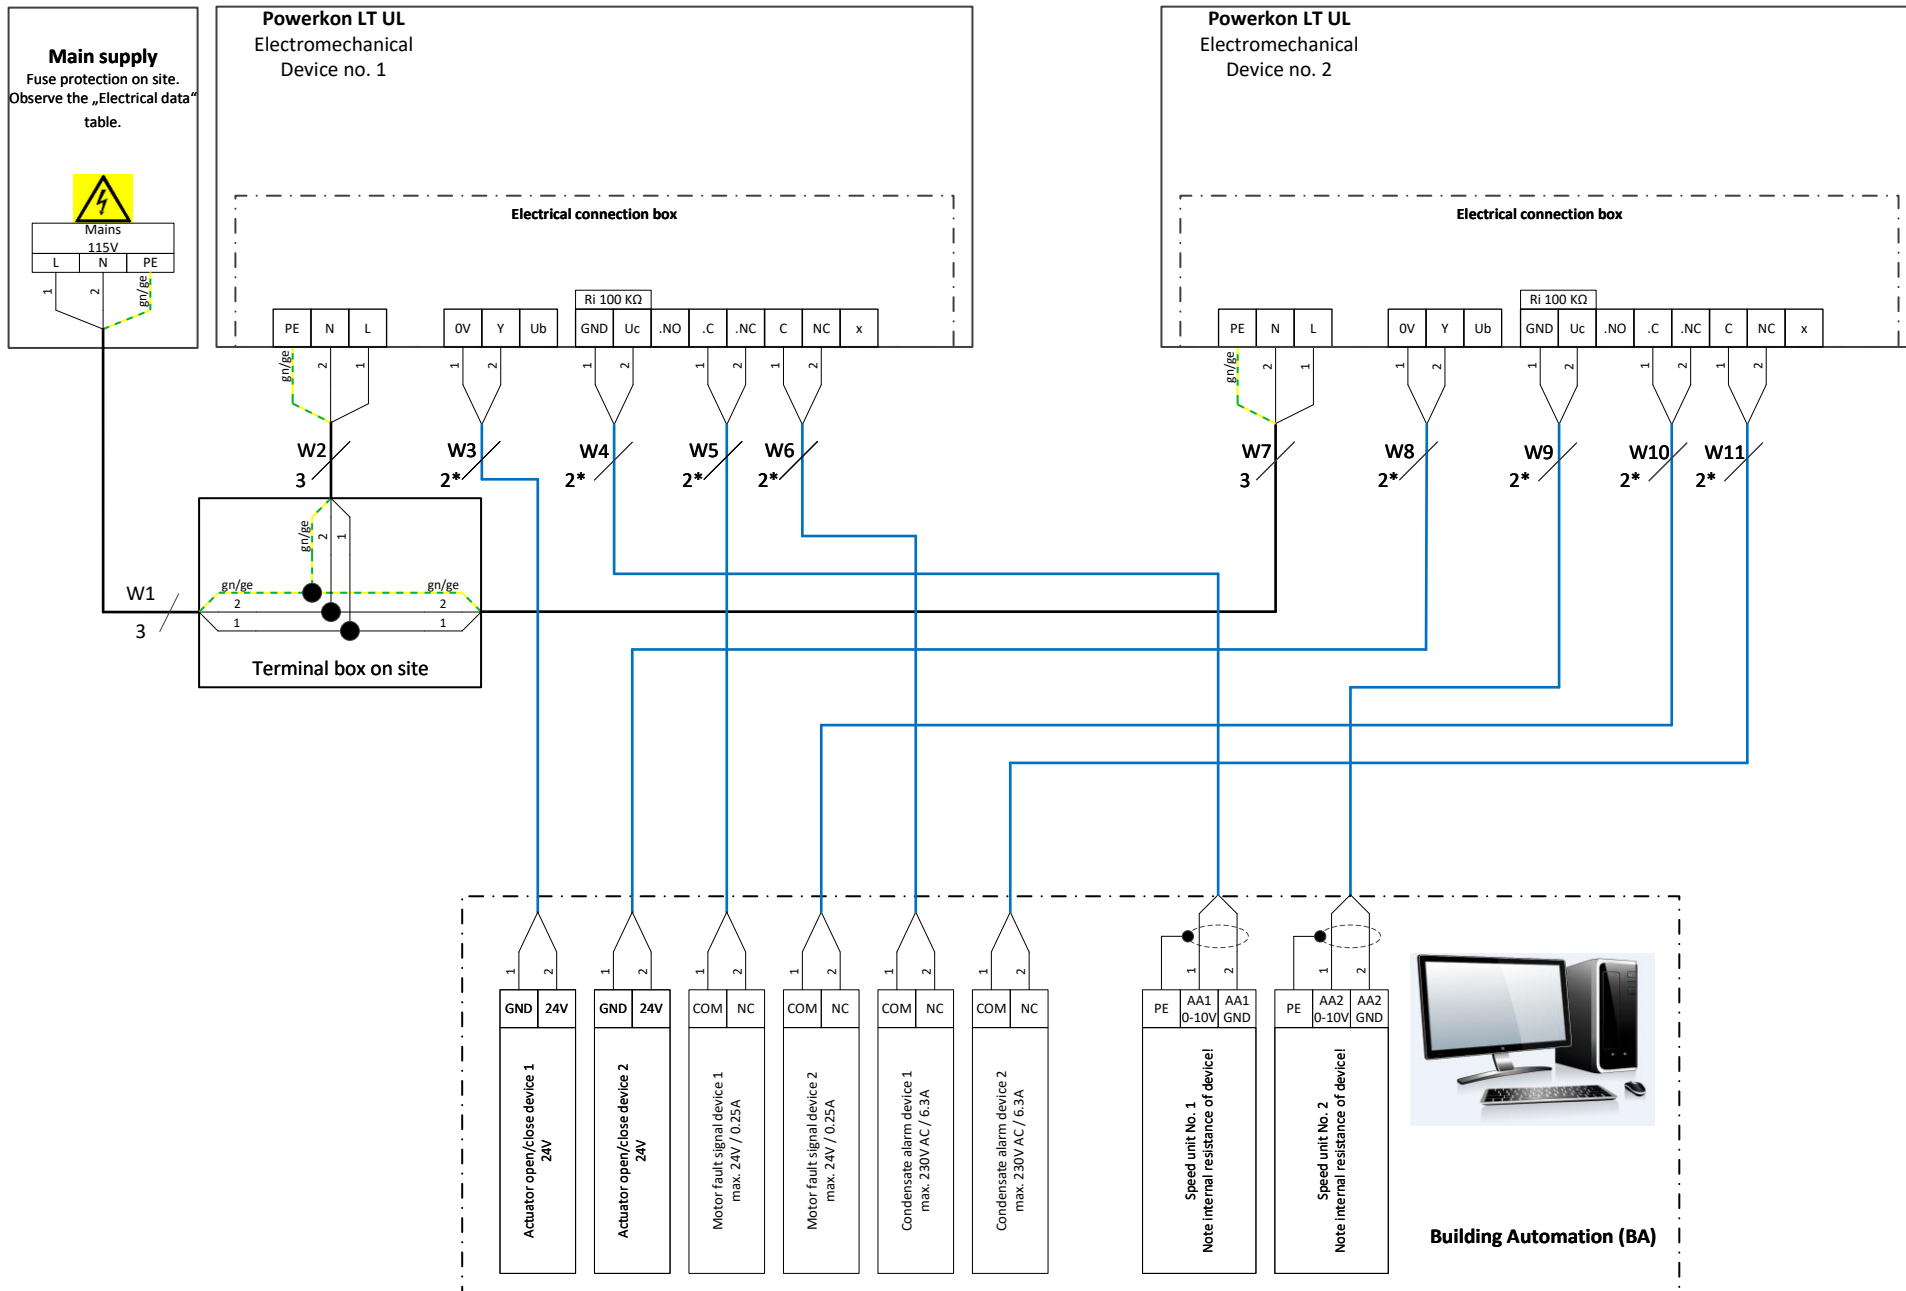

The following information on cable types and cable laying must be observed in compliance with National Electric Code.

The installation, operation and maintenance of these devices must comply with the country-specific applicable laws, standards, regulations and directives.

Without *: NYM-J. The required number of cores incl. protective conductor is indicated on the cable. Cross sections are not indicated, as the cable length is included in the calculation of the cross section.

*):
Shielded cable, J-Y(ST)Y 0.8mm. Lay separately from power lines.

- If other cable types are used, they must be at least equivalent.
